

NEW

pro-collagen banking serum

94% more effective in preserving skin's collagen for plumper, fuller skin*

*Versus untreated skin. Based on in-vitro testing.

collagen skin facts

- Our body's collagen production decreases by about 1% per year after age 30.
- Lifestyle and environmental factors like stress, lack of sleep, and pollution can hasten this decline.
- Topically applied collagen is too large to penetrate skin or replenish its collagen.
- Smaller-sized ingredients are better able to support collagen and counteract natural degradation.

Pro-Collagen Banking Serum is packed with amino acids – the building blocks of collagen. It gets key ingredients where your skin needs them, and goes beyond plumping to help preserve the collagen your skin has now. The result: more resilient, visibly plumper, and more luminous skin, along with a reduction in the appearance of fine lines and wrinkles into the future.
